

HENSHAW MACHINE CONTROLS

Faster, More Effective Turnkey Solutions

Henshaw builds advanced distributed controls panels for today's challenging manufacturing environment.

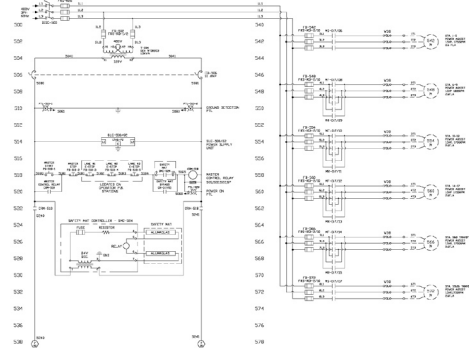

Henshaw has the ability to build simple one or two enclosures all the way to an entire body shop of panels.

- Improve productivity
- Increase quality
- Enhanced serviceability

Henshaw combines its 30 years of experience in controls design with state-of-the-art technology to offer you a complete solution for your design, panel build and integration needs.

End-to-End Service

We offer you full service – from design to build and/or installation/start-up. This ensures seamless quality and faster implementation so you can realize the return on your investment as quickly as possible.

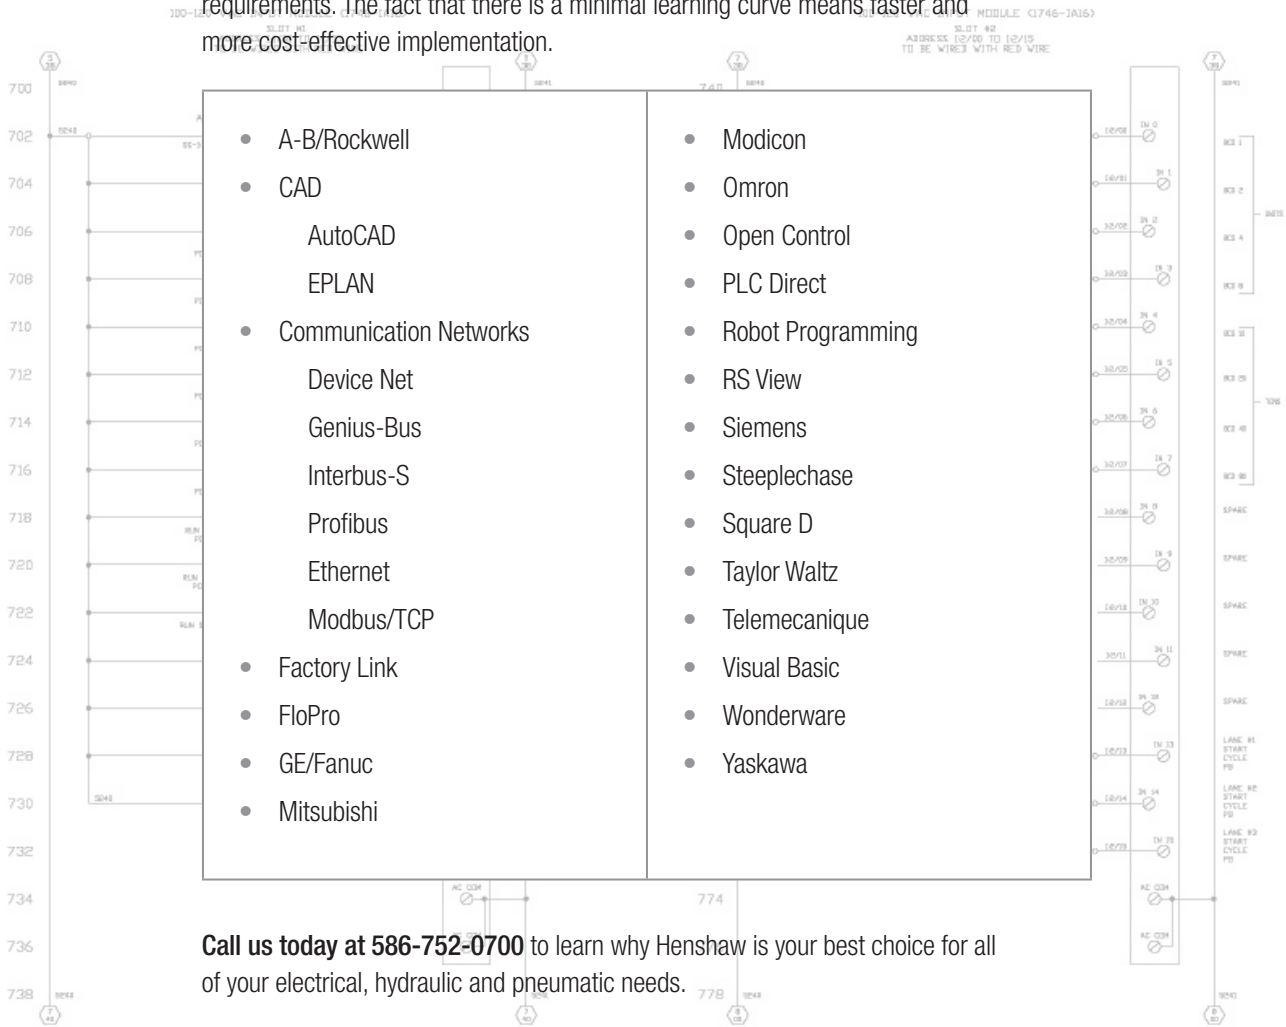

The Henshaw team has a wide range of experience in the execution of a variety of machine controls system applications, including:

- Assembly automation
- Balancing systems
- Controls upgrades
- Conveyor systems
- Gauging stations
- Heat treat automation
- Induction heating
- Inspection and test
- Machining Operations
- Marking systems
- Material handling
- Paint finishing
- Robot integration
- Sorting systems
- Storage and retrieval systems
- Waste water treatment
- Welding systems

Henshaw Machine Controls

Henshaw team members are cross-trained in multiple controls platforms. We utilize a wide range of programming software and are well versed in customer-specific requirements. The fact that there is a minimal learning curve means faster and more cost-effective implementation.
